

ARM-450 bus cables: a daisy chain, ONE joint per cable

controller -> J1 -> J2 -> J3 -> J4 -> J5 -> J6 (each ST3215 has an IN and an OUT socket)

No joint turns more than 180 deg in total (the ST3215 is not continuous): a cable can only flex back and forth, it can never wind up. Tie each cable down on both sides of its joint and leave the loop shown.
